POND

AN ALMANACK

for the Year of our

LORD GOD

1686.

BODLEIAN

Being the second after Bissextile or Leap-year, & from the Worlds Creation at the Spring 5689 years Compleat.

Amplified with many good things both for pleasure and profit: and fitted for the Meridian of *Saffron-Walden* in *Essex*, where the Pole is elevated 52 degrees and 6 minutes above the Horizon.

And may serve indifferently for any other place of this Kingdom.

CAMBRIDGE,

Printed by *John Hayes*, Printer to the University, 1686.

The vulgar Notes and moveable Feasts for this Year in both Accounts, *viz.*

Julian or *English.*			*Gregorian* or Forreign.

The Suns entrance into the four Cardinal Signs.

HE enters *Aries*, *March* the 10 day, 55 min. past 1 in the morning, at which time the Figure of the Heavens will appear as followeth, *viz.* 25 degrees of ♐ Ascending in the East, 1 degr. of ♏ upon the Cusp of the 10 house, 20 degrees of ♏ upon the Cusp of the 11 house, where ☿ is, 5 degrees of ♐ upon the Cusp of 12 house, &c.

He enters ♋ June 11, 46 min. past 2 in the morn.

He enters ♎ Septemb. 12, 8 min. past 8 at night.

He enters ♑ Decemb. 11, 4 min. past 8 in the morn.

MArriage comes in on the 13 day of January, and at Septuagesima Sunday it is out again untill Low-sunday; at which time it comes in again, and goes not out till Rogation-sunday: thence it is forbidden untill Trinity-sund. from whence it is unforbidden till Advent-sunday: but then it goes out, and comes not in again till the 13 day of January next following.

The

The beginning and ending of the Terms.

Hilary Term begins January 23, ends February 12.
Easter Term begins April 21, ends May 17.
Trinity Term begins June 4, ends June 23.
Michaelmas Term begins Octob. 23, ends Novem 29.

A Table shewing how many years Purchase a Lease or Annuity is to endure for any number of years under 30, is worth presently, at interest upon interest, at six in the hundred, and shewing also how to discount any Lease in being, and the true value of the Reversion after any number of years.

Years of Lease.	Years.	Months.	Dec. parts.
1	0	11	0
2	1	9	9
3	2	8	1
4	3	5	9
5	4	2	5
6	4	11	0
7	5	7	0
8	6	2	5
9	6	9	6
10	7	4	3
11	7	10	7
12	8	4	6
13	8	10	3
14	9	3	6
15	9	8	5
16	10	3	3
17	10	5	8
18	10	9	9
19	11	1	3
20	11	5	7
21	11	9	3
22	12	0	5
23	12	3	6
24	12	6	6
25	12	9	4
26	13	0	0
27	13	2	5
28	13	4	9
29	13	7	1
30	13	9	2

The use and Explanation of this Table.

THe first Column at the left hand sheweth the years of a Lease, or Annuity, and right against each year are the years, months, and decimal parts of a months purchase that such a Lease or Annuity is worth.

Example.

Suppose a Lease or Annuity to continue 18 years, and you would know how many years purchase it is worth in ready money, look in the Column of the years of a Lease, for 18 years, and against the same you shall find 10, 9, 9. which shews such a Lease to be worth 10 years, 9 months, and 9 ten parts of a months purchase. So that the yearly rent being 12 pound, the value will be thus found.

	lb	s	d
10 times 12 is	120	0	0
12lb in 9 mon. is	9	0	0
in 9 parts is	0	18	0
the value	129	18	0

But if you buy the Reversion of a Lease now, as suppose a Lease of 20 years continuance, and you commence not till 5 years be past, in this and such like cases, look for the present worth of the Lease, as this of 20 years, which will be found worth 11 years, 5 months, 7 tenths of a months purchase, then look the present worth of a Lease of 5 years, which will be found worth 4 years, 2 months, 5 tenths, take this out of 11 5 7 and there remains 7. 3. 2. which are 7 years, 6 months, 2 tenths of a months purchase; and so much is the Reversion of the Lease of 20 years, after 5 years worth be expired.

Laſt quarter the 7 day, 12 min. paſt 1 after noon.
New moon the 14 day, at 2 in the morning.
Firſt quarter the 21 day, 50 min. paſt 8 in the morn.
Full moon the 29 day, 12 min. paſt 10 before noon.

The second Reason of the aforesaid Difference, is drawn from the Difference of Union in the Beams which in the work of the Stars is a thing regarded, as of special consequence; and it is clear that in Winter the Union of the Beam of the Sun incident with the Beam reflected, is not comparable with that which the greater altitude of the Sun causes in Summer,

difference, as is usual in Addition of Proportions, sheweth that this difference of union together with the Sun's stay in Summer, causeth the heat to exceed that which we receive in Winter above twelve times, for $\frac{1}{1}$ or 1 to 1 added to $\frac{1}{1}$ or 0 to 1 the sum is 12 to 1.

June 1686.

In this month Inoculate, and at the full moon gather your Herbs to keep dry for the whole year, weed your Corn fields and Gardens, set Rosemary and Gilliflowers, sow Lettice. Shear Sheep the moon increasing, for then their wooll will grow again the sooner.

the Sun hardly imparteth $\frac{1}{5}$ of that Heat to us at his meridional height in the Winter Solstice, which we feel from his highest position in the Summer. This diminution considered with the former impediments, leaveth us not above the fourty eight part of that heat in Winter, which we receive in Summer for $\frac{1}{1}$, $\frac{1}{2}$, and $\frac{1}{2}$ added together the sum is $\frac{48}{1}$.

And as it is mathematically demonstrated the opposition and impediment which the Sun Beams do suffer in Winter is triple to that which they feel in their Summer passage, and doth therefore weaken the sun's force in that proportion which being added to the rest of the causes doth prove that the heat in Summer excelleth the Heat in Winter 144 times, for $\frac{1}{4}$ added to $\frac{1}{4}$ the sum is 144.

The use of the Table in Example.

King *Henry* 8 began his Reign in the year of *Christ* 1509, *April* 22. He Reigned 37 years, 10 months, and 2 days. It is since he began his Reign 177 years compleat the 22 of *April* this year 1686. Now to know the time since the end of his Reign, before his name standing on the right hand, you shall there find 139 years since he died, *Jan.* 28. And so of the rest.

POND.

POND

M. DC. LXXXVI.

The latter part of this ALMANACK for the year of our LORD GOD 1686.

Being the 2d after Bissextile or Leap-year, and from the Conquest of *England* by *William* Duke of *Normandy* 620 years.

Wherein is contained the Eclipses, with several usefull things and Tables, as a Table of all the Shires in *England* and *Wales* shewing how many Parliam. Men, Hundreds, &c. are in each Shire, as also general Prognosticks of Pestilential years, and the Fairs in a larger manner then formerly.

Frigidus & ficcus Satur. Jup. *æstus udus.*

768.	793.	9241.	Bishopricks	24

The Explanation and use of the foregoing Table, with some observations of *England*.

THe Table consisting of several Columns, is plain and easie; in the first column towards the left hand, is a Catalogue of all the Shires in *England* and *Wales*, right against each of which, under their proper Titles, are the number of Parliament Men, Hundreds, Market-Towns and Parishes cotained in the same, as also the Length, Breadth, and Circumference of the Shire, with the name of the Chief Town thereof, and its Distance and Situation from *Cambridge*.

As for Example,

I desire to know all the forementioned things, in or belonging to *Norfolk*, I look for *Norf.* in the first column (the Shires being in an Alphabetical order) and right against the same I find, 12 Parliament Men, 31 Hundr. 28 Market-Towns, 660 Parish. its length 50 mil. breadth 30, circumference 240, the chief Town *Norwich*, its distance from *Cambridge* 49 miles, and its situation from thence North East, signified by N. E. thus in like manner is to be done for any other Place.

England, being the Chiefest and pleasantest part of Great *Britain* is trebly divided, 1 into six Circuits destinated to the Itinerary Judges, 2 into 22 Episcopal Dioceses, 3 into 40 Shires; the Shires were first made by King *Alfred*, for the easier and speedy administration of Justice. This King also divided his Subjects into tens, or Tythings, every of which severally, should give bond for the good behaviour of each other; ten of the nighest Tythings made the Lesser division which we call Hundreds, which name cannot be derived from the number of Villages, none of our Hundreds being so large: these Hundreds are called Wards in *Cumberland*, *Westmorland*, *Durham*, *Northumberland*; in every Hundred there

a Conſtable called the Conſtable of the Hundred, who receives Warrants from the Sheriffs, or Juſtices, and diſpatches them to the Conſtables of each Town and Village in his Hundred, for the effecting of publick buſineſſes. To enumerate the plenties and ornaments of *England* requires more room than here is allotted, therefore it may ſuffice to expreſs ſome of her Excellencies in theſe verſes. *viz.*

England *is ſtor'd with Mountains, Bridges, Wooll,*
With Churches, Rivers, Women beautifull.

Of the Eclipſes this Year.

THis year there will be but one Eclipſe, and that will be of the Moon, on the 19th day of *November*, at 11 at night, it will be a great Eclipſe, and will be celebrated in 8 degrees of *Gemini* near the *Bull's Eye*, it begins in the Mid-heaven and ends in the 9th houſe. *Jupiter* and *Mercury* beſiege the Sun, and all oppoſe the eclipſed Moon.

There is celebrated this year a notable Conjunction of *Saturn* and *Mars*, in 7 degrees of *Libra*, on *October* the 25 day, and although this Conjunction be of ill influence unto all Places concern'd; yet it will be very delightfull to obſerve the Planets conjoyn'd to riſe near *Arcturus* and the *Virgins Spike*, two hours before the Sun riſes ſeveral mornings together.

Prognoſticks of Peſtilential and unwholſom Years.

IT is obſerved by the Learned, that thoſe Years are Peſtilential and unwholeſom, when there are great numbers of Frogs, Flies, Locuſts, *&c.* the reaſon is, becauſe thoſe Creatures being ingendred of putrefaction, when they abound, ſhew a general diſpoſition of the Year, and conſtitution of the Air, to Diſeaſes of putrefaction: ſo likewiſe the ſame Prognoſtick holdeth, if you find Worms in Oak Apples; for the conſtitution of the Air, appeareth more ſubtilly, in any of theſe things, than to the ſence of Man.

Great and early Heats in the Spring (and namely in *May*) without Winds, portend alſo peſtilent Years: and generally ſo do years with little Wind or Thunder.

Great Drought alſo in Summer, continuing till towards the end of *Auguſt*, and ſome gentle Showers upon them, and then ſome dry weather again; do portend a peſtilent Summer the year following: becauſe about the end of *Auguſt*, all the ſweetneſs of the Earth which goeth into Plants and Trees, is exhaled; (and much more if *Auguſt* be dry) ſo that then nothing can breath forth of the Earth, but a groſs Vapor which is apt to corrupt the Air: and that Vapor by the firſt Showers, if they be gentle, is releaſed, and cometh forth abundantly: therefore they that come abroad ſoon after thoſe Showers are commonly taken with Sickneſs. And in *Africk*, no body will ſtir out of doors after the firſt Showers: but if the Showers come vehemently, than they rather waſh and fill the Earth, than give it leave to breath forth pleaſantly. But if dry weather come again, than it fixeth and continueth the corruption of the Air, upon the firſt Showers begun, and maketh it of ill Influence, even to the next Summer, except a very froſty Winter diſcharge it, which ſeldom ſucceeds.

The leſſer Infection of the Small Pox, Purple-Fevers, Agues, in the Summer precedent, and hovering all Winter, do likewiſe portend a great Peſtilence in the Summer following; for putrefaction doth not riſe to its height at once.

A dry *March*, and a dry *May*, portend a wholeſom Summer, if there be a ſhowring *April* between: but otherwiſe it is a ſign of a peſtilential Year.

Furthermore, becauſe the Air according to its ſituation doth much alter and change the Conſtitution of Mans body, and may breed pure and wholeſom Bloud, or corrupt and bad Bloud, and malignant Humors. Therefore that you may know what Air is pure and ſound, and what Air corrupt and infectious, we will add ſome Experiments, which the Judicious have obſerved, whereby you may conjecture how the Air is diſpoſed; and that firſt,

A ſound and pure Air is made hot preſently after Sun riſing, and is made cold preſently after Sun-ſetting.

Which yieldeth a pleaſant ſmell after Rain, clear and not evaporated, open and lightſom, where the North wind bloweth, and where the Eaſt wind bloweth in the morning.

A corrupt and infectious Air, is made by the often blowing of the South, or South-eaſt-wind, or by the South-weſt, or Weſt in the evening, which ingender Sickneſſes.

Where the Air is cold long after Sun-riſing.

Where the Air is long hot after Sun ſet.

Where the Air is long cloſe, cloudy, or thick.

The names of divers Regions, Cities, and Towns subject to the 12 Signs and 7 Planets.

Under ♈ and ♂ are these Regions,

England, France, Germany, Suevia, Silesia the higher, *Polonia* the less, *Denmark, Syria, Palestine:* Of Cities and Towns, *Naples, Anconia, Capua, Ferraria, Florence, Verona, Lindavia, Trajectum, Padua, Brunswick, Cracovia.*
